Step 1 Bronco Engine Cover Install Instructions

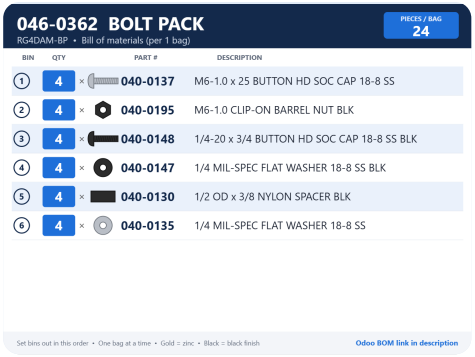

Step by step on how to install the Ford Bronco (2021+) Engine Cover. Covers are made for the 2.3L and 2.7L engines; the photos show the 2.3L and the 2.7L installs the same way. Please read all steps carefully before starting the install. Tools needed: 4mm hex, 8mm socket and a 5/32" hex.

Step 2 Included Parts & Hardware

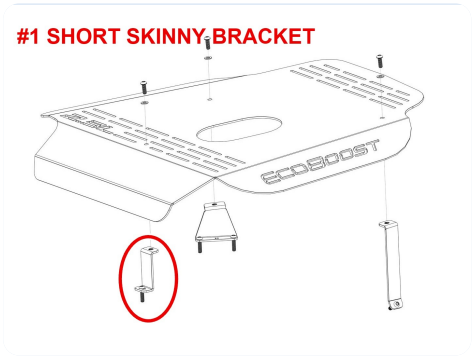

Check that you have all of the parts and hardware shown before starting. Hardware pack: 046-0362 (every bolt, nut and washer is listed in the bill of materials picture).

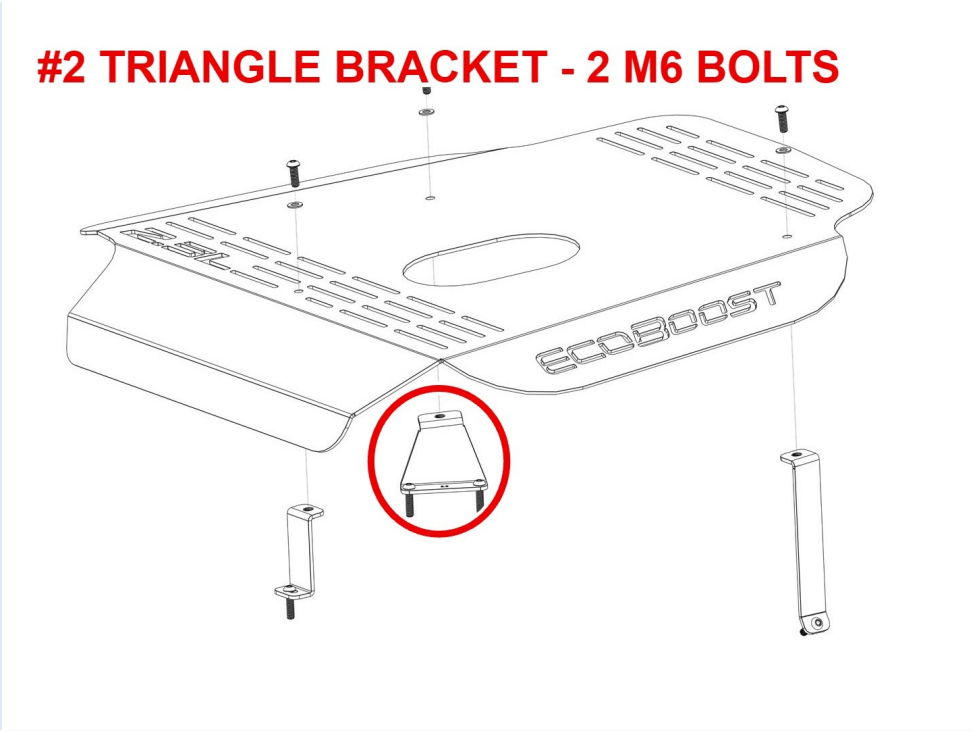

Step 3 Install Bracket #1

Install the three mounting brackets in the engine, starting with bracket #1, the short skinny one. Place it as shown with a stainless M6 button head into the factory standoff, tightening with a 4mm hex with the bracket facing back.

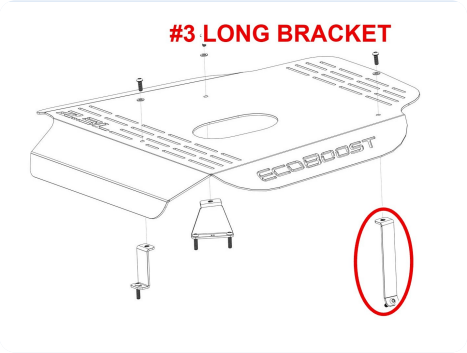

Step 4 Install Bracket #2

Install bracket #2, the triangle shape, with two stainless M6 button heads into the factory standoffs. Tighten with a 4mm hex with the top PEM flange facing the passenger side.

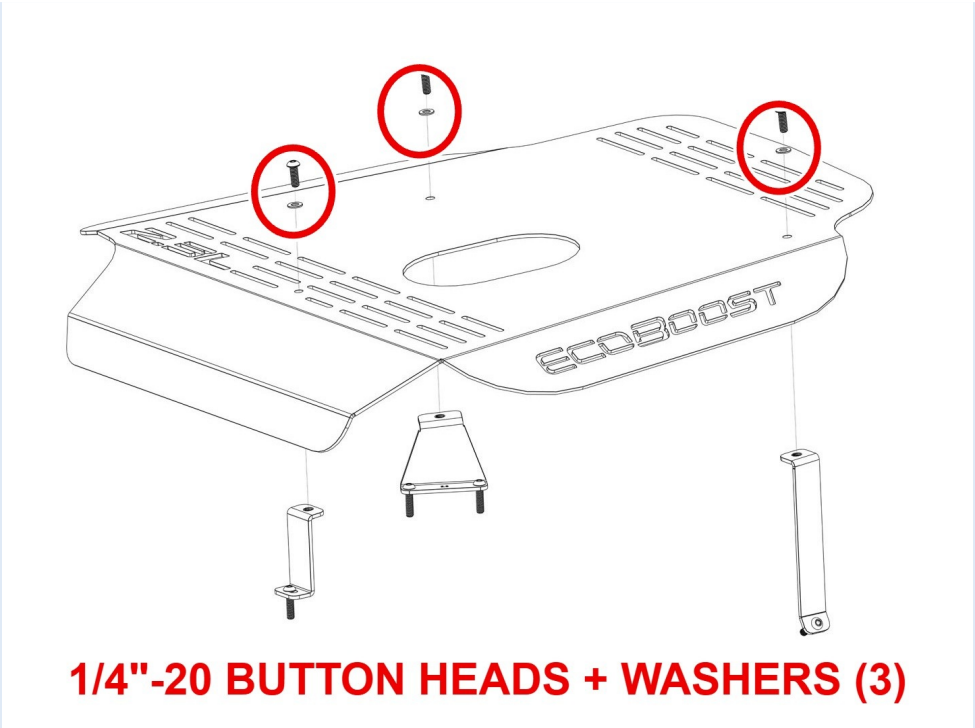

Step 5 Install Bracket #3

Remove the factory 6mm hex head bolt with an 8mm socket, then install bracket #3, the longest, with a stainless M6 hex head bolt. Keep the bracket straight with the top PEM flange facing the passenger side.

Step 6 Install the Engine Cover

Place the engine cover on the brackets, line up the three holes, and loosely fasten with the black 1/4-20 button heads and stainless washers. Snug all bolts with a 5/32 inch hex. (This is the 2.3L cover; the 2.7L is similar.)

Step 7 Final Check

That's it! Make sure all of your bolts are tight and enjoy your new Engine Cover! Be sure to check out jcroffroad.com for even more Ford Bronco products.

Step 8 Installation Complete

Congratulations, you have completed the install of your new Bronco Engine Cover! Enjoy your new product.
