4	6 ×	040-0052	5/16 NYLON LOCKNUT

Set bins out in this order • One bag at a time • Gold = zinc • Black = black finish

Odoo BOM link in description

Check that you have all of the hardware shown before starting. Hardware pack: 046-0089 (every bolt, nut and washer is listed in the bill of materials picture).

Step 4 Remove Netting

Optional: cut out the old netting with a razor blade. Pull the net outward and cut right at the edges. Tools: Phillips screwdriver, 1/8 inch drill bit or pick, razor blade.

Step 5 Mark Hole

Align the MOLLE panel to the existing netting trim and mark one hole. The panel is directional: the bottom radii must match the trim piece on the tailgate, with the larger radius closest to the rear when the hatch is open.

Step 6 Start Screws

Remove the panel and start one screw at the spot you marked. Once the hole is started, remove the screw and reinstall it through the panel.

Step 7 Align Panel

Align the panel and start the rest of the screws.

Step 8 Install Screws

With all screws started, choose: snug them all down and you are done, or remove them, install the provided spacers behind the panel and reinstall the screws. Spacers let you strap gear all the way around the panel edges. Do not overtighten.

Step 9 Installation Complete

Confirm all hardware is tightened. Congrats! Your installation of the GX Hatch MOLLE Panel is now complete. Enjoy!
