3

Begin by removing the grab handles. Pop off the plastic covers and remove the (2) factory hex bolts using a 10mm socket. Repeat this on each side of the vehicle.

4

Install the mounting brackets with the handle mounting holes and the factory hardware. This can be installed with or without the handles. If installing with the rear window molle panels, stack the shelf mounting bracket over the molle panel mounting bracket. Longer M6 bolts and small washers are provided if the stack up for your set up is too much for the factory hardware.

Feedback?

Place the shelf onto the mounting brackets and loosely secure it using the short 1/4" hardware.

Install the front panel onto the shelf using the short 1/4" hardware (if installing without a pet divider). If you are only installing the upper shelf on its own, center the shelf and tighten all hardware to complete the install.

Feedback?

7
If installing with rear window molle panels, secure the molles to the shelf using the 1/4" hardware as shown. The provided longer 1/4" bolt is required in the hole circled in the image. The bracket will mount to the inside of the panel on one end and the other end will mount to either the shelf and front panel or shelf and pet divider depending on what you are installing.

8
If installing with a pet divider, secure the center of the panel to the shelf with 1/4" hardware.

Finally, adjust the position of everything to get it in the desired position and then tighten up all hardware and the install is complete.
