Step 2 Included Parts

Check that you have all of the parts shown before starting.

Step 3 Remove Tub Bolts

Remove the 3 bolts per side that go up through the bottom of the tub with a 13mm socket. Tools needed: 13mm, 10mm and 18mm sockets, 3/16 hex, 13mm end wrench and a floor jack. (1:42)

Step 4 Remove Pinch Seam Bolts

Remove the 6 side bolts that go through the pinch seam with a 10mm socket. (2:21)

Step 5 Remove Factory Rails

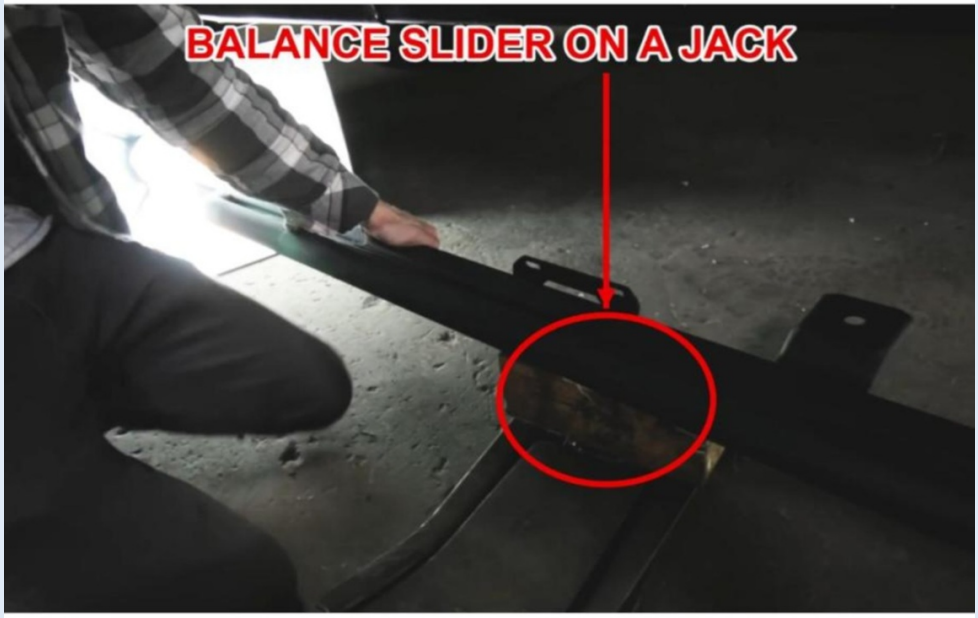

Once all the bolts are out, lower the factory rail off the Jeep. Hold it so it does not fall. Tip: tape off and paint the bottom edge of the pinch weld before installing the sliders if you want it covered. (3:26)

Step 6 Remove Body Mount Bolts

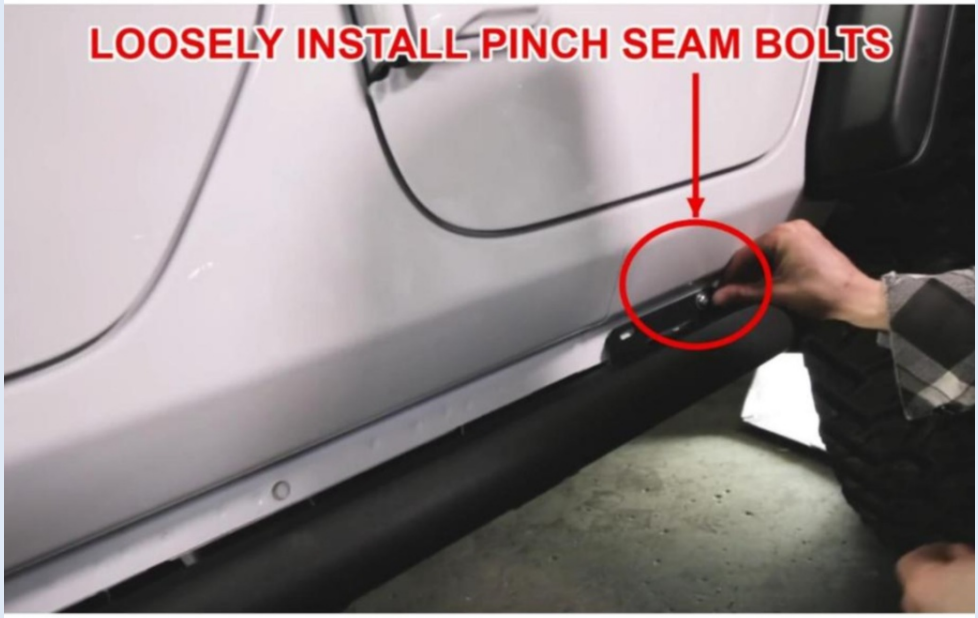

Remove the 3 body mount bolts per side with an 18mm socket. They are long, so you may need to pull down on them the rest of the way. Keep them, you will reuse them. (4:18)

Step 7 Position Slider on a Jack

Grab a friend or a floor jack and balance the new JCR Classic Slider on it. Lift it into place until the holes line up with the pinch seam. (4:47)

Step 8 Loosely Install Pinch Seam Bolts

Loosely install the button head bolts through the pinch seam, starting at the front. Leave everything loose for now. (5:51)

Step 9 Loosely Install Body Mount Bolts

Loosely reinstall the 3 factory body mount bolts you removed earlier. Keep everything loose until all bolts are started. (6:26)

Step 10 Tighten Pinch Seam Bolts

Remove the jack. Tighten all 6 pinch seam bolts first using a 3/16 hex and a 13mm (or 1/2) end wrench. (7:36)

Step 11 Tighten Body Mount Bolts

Tighten the 3 body mount bolts with the 18mm socket. Repeat every step on the other side. (8:42)

Step 12 Installation Complete

Confirm all hardware is tightened. Congrats! Your installation of the Jeep JL Classic Rock Sliders is now complete. Enjoy!
