Step 2 Included Parts

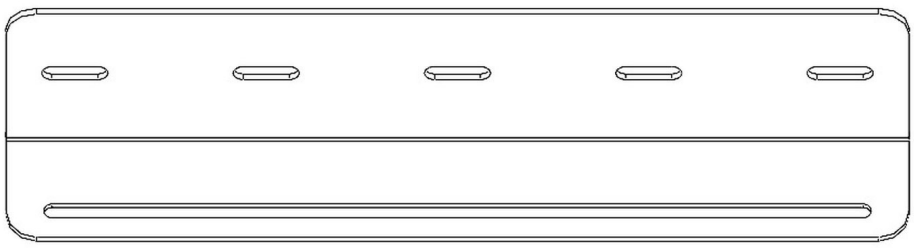

Check that you have all of the parts shown before starting.

Step 3 Included Hardware

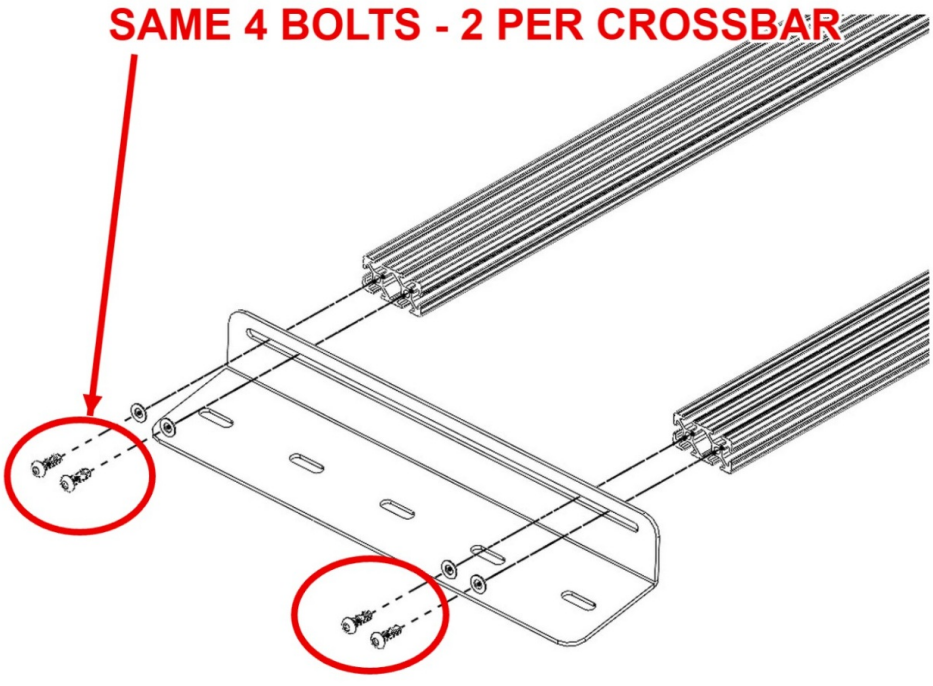

No extra hardware is needed. This mount reuses the 4 bolts that come out of the crossbars.

Step 4 Choose Mount Location

Pick the spot on your rack for the accessory mount. It must span 2 crossbars. Remove the 4 threaded 1/4-20 bolts from the crossbars, 2 from each.

Step 5 Bolt Mount Down

Set the accessory mount on the rack in the same spot and bolt it down with the same 4 bolts you removed, as shown.

Step 6 Adjust and Tighten

Slide the mount left to right in its slot to the position you want, then tighten all 4 bolts. You now have a mount for Quick-fist mounts or any gear you carry.

Step 7 Installation Complete

Confirm all hardware is tightened. Congrats! Your installation of the Roof Rack Side Accessory Mount is now complete. Enjoy!
